Krasnodar (N45-02, E39-00)

Barracks installation of one six-story brick building, about 120 meters long, two wooden storehouses, and a bar-racks yard; enclosed by a wire fence.

Southern sector of the city, near the former cadet school. Occupied by about one battalion of troops wearing bright-red epaulets and black epaulets with tank insignia. Forty to fifty trucks were parked in the barracks yard. Also, eight to ten tanks with large bogie wheels, about twenty 76.2-mm AT guns, and about ten 120-mm mortars belonged to the unit.

Military installation of one large garage in a fenced-in yard.

Near the former cadet school.

Ten to 15 T34 tanks, five to seven 37-mm AT guns, and two or three AT guns of a heavier model were parked in the yard. Troops wearing tank insignia on their epaulets were frequently observed moving out of the installation with AT guns towed by tanks or horses. The former cadet school was evacuated by PWs in July 1949. An advance detail arrived there in early August 1949 and was later followed by a unit referred to as engineers.

Extensive new barracks installation.

Northern perimeter of the city, on both sides of a wide road reaching the airfield at a distance of two or three km.

Construction was started in early 1948. The installation was ready for use in February 1949, but was not occupied. That section of the installation which was located west of the road included four two-story barracks buildings, two two-story administration buildings, four small wooden houses, two stables, and six storage sheds. That

Soviet Supply Installations in the North Caucasus MD

Installation Location

Ordnance shop of seven single-story brick build- meter of the city, ings, on the premises of a destroyed barracks installation, which housed also the PW camp; enclosed by a wire fence.

Northwestern perieast of an airfield.

Military rotor vehicle repair shop; an old establishment covering a built-up area of about 350 by 150 meters; enclosed by a high wall. For details see Enclosure 1.

Eastern sector of the city, about two km south of the Selmash Railroad Station, on both sides of a street with a streetcar line leading from north-northwest to south-southeast. The repair shop proper was located on the west side of the street, whereas materials, spare parts, fuels, etc., were stored on the east side of the street.

Occupation

Numerous lathes, milling machines, and drilling machines were observed in one of the buildings. Light and heavy infantry weapons were seen there once. Boxes of various sizes were frequently carried out of the other six buildings. The troops observed in the installation wore red epaulets.

Referred to as Avto Remontnyy Zavod 50 (A.R.Z. 50) a. General: In charge of the repair shop was one lieutenant colonel, to whom one Lieutenant Colonel Timoshenko (fnu) was assigned. According to Soviet soldiers, the superior head-quarters of the repair shop was a motorized division stationed in and around Rostov. Many soldiers wore on their epaulets insignia consisting of a wheel with two wings. Attendants of an officer candidate school. tank troops, and air force troops were also employed in the shop. Motor vehicle engines were overhauled and repaired in the installation. Most of the old Soviet engines were replaced by new German ones. b. Work force and working hours:

employed in the repair shop consisted of 700 to 800 male and female workers, including about 50 PWs. They worked two shifts. The Soviet workers were skilled and capable of operating German-made machines.

- c. Type and rate of production: The following engine types were The following engine types were observed being overhauled: ZIS 5 ZIS 151, Studebaker; Dodge, Ford 6, Willys, Gaz-AA and Gaz-M1. The monthly output ranged from 200 to 400 engines and 800 to 1,000 lifting jacks. These figures were published in output suwers. in output surveys.
- d. Power supply: Electricity was supplied from outside by an overhead transmission line via two transformer stations. The electricity used had a voltage of 380. The installation had an emergency power station fitted with a Maybach diesel engine.

Ten to 15 surface tanks, more than ten meters high and five to seven meters in diameter, enclosed by a high board railroad line leading resting on concrete bases. fence topped by barbed to the north. Pipe lines came out of the fenced-in area. Civilian motor vehicles were frequently observed. The installation was guarded by civilian sentries armed with rifles.
